III. TEACHING

The Architecture Department of the Faculty of Civil Engineering provides an architectural education compatible with other European technical universities. The training of an architect needs to be comprehensive and includes technical, artistic, humanistic, special theoretical, and engineering disciplines. The architect is expected to have a general understanding of all aspects of building. His work is artistically creative and technically demanding. The courses also involve the design of different building types for residential, commercial, social, industrial, agricultural and transport facilities. An integral part of the education also involves the restoration of old buildings, the preservation of historical monuments, interior design, town planning and landscape design.

The content and proportion of each subject is regulated in accordance with the requirements for education defined by EU Directive.

IV. RESEARCH TARGETS

The research activity of the Department is devoted to problems involving the restoration and revitalization of the Slovak landscape, including:

- contributions to the general methods and philosophy of the revitalization of the landscape in selected regions and urban centres;
- analysis of traditional technologies, materials and possibilities for their utilization today;
- detailed studies of regional architectural forms and construction principles and their application to contemporary architecture;
- surveys of local activities and spatial and construction requirements concerning buildings;
- developing strategies and supporting economic and energy self-sufficiency.

Research is also conducted on the qualities of the design of historical areas and city centres.
