Impact of TAP project into STUBA

Partially results of TAP project during 2017 year and beginning of 2018 had positive influence to increasing of education process in Slovak University of Technology in Bratislava (STUBA) at this area:

1. Meetings of partners in Athens and Bratislava allowed to us to know education and research approach in Palestine, Spain, Greece and Ireland universities and education organizations and ti increase the quality of education process and research activities in STUBA at these points:

   - Structure of study programmes in bachelor, master and doctoral stage of education
   - Necessary infrastructure for education process quality
   - System of admission procedure at universities
   - Evaluation procedure of students
   - Content of questionnaires for evaluation of pedagogical process at universities
   - Approach of pedagogical staff to students (type of lectures and seminars, types of exams)
   - Systems to increase of attractiveness of education process
   - Education and research criteria for university teachers
   - Possibility of application in practice of university graduates
   - Control of quality of education process
   - Using of information technology in education process (Academic information systems at universities)
   - Social conditions for students at universities (culture, sport)
   - Libraries at universities (databases of books, journals)
   - AQAC (Accreditation and Quality Assurance Commission) activities
   - Accreditation process at universities and quality level of education process

2. Document Project Quality Plan prepared in TAP project can be implement in STUBA as a useful methodical document for increasing and monitoring quality of educational process and project activities in STUBA

3. Project Quality Assurance prepared by Alicante university allowed to increase in STUBA :

- Quality Assurance Methodology of education process,
- Quality target indicators,
- Evaluation process of study.

4. Experiences from Palestine universities in pedagogical process gave opportunities to STUBA to find and offer them effective way to increase education process and its monitoring during TAP project (for example Academic Information System in STUBA is prepared for total electronic communication between teachers and students and offers all necessary information for them(study programmes, schedules, bachelor, master and doctoral thesis system, evaluation of study etc.)
